1 . I N T R O D U C T I O N

The following specification outlines the requirements for the LOGO COMPANY'S platform.

The specification clarifies the various aspects of the project, as it is possible to develop within the given price-range, and also deals with some issues that should be raised before production commences. It concerns the frontend and backend functionality of the website.

1.1 THE WEBSITE

.....

LOGO COMPANY'S online presence is the natural extension of the established company. The website should reflect the professional and elegant brand.

The website introduces the audience to LOGO'S business and allows them to sign up for mailing list and shop online.

.....

1.2 SERVER/WEBHOTEL

A webhotel, server or similar production environment should be established before the actual development can commence. It is client's responsibility to acquire these.

1.3 PROJECT MILESTONES

Project will be divided into milestones, and upon completion of each of these, a partial payment should be made before progressing with project. Time schedule with deadline will be set after agreement on requirements.

1.4 OPEN SOURCE

It is DASIGN policy to use open source code when suitable to cut costs, and deliver the best product possible.

2 . T H E W E B S I T E

2.1 FRONTEND (What visitors see)

Figure 1 Basic layout of website. This is the first page visitors will see.

The visitors can gain access to the following areas:

- HOME . Introduction page, where guests are greeted and the company's purpose is explained.
- MAILING LIST. Users can sign up for e-mail updates.
- ONLINE SHOP. Users can purchase products through the portal.
- CONTACT US. Visitors can send enquiries to managers through a spam-free form.
- Common links (bottom) – SITEMAP, ABOUT SITE, LICENSE, LINKS (text-pages with content).

END OF REQUIREMENT SPECIFICATION EXAMPLE...THIS WAS JUST A TASTE. DOCUMENT CONTINUES TO OUTLINE THE REST OF THE PROJECT.
